## **CGD500 Gas Detection System**

# Change to a new system **without replacing everything**

# Get the benefits of a modern system

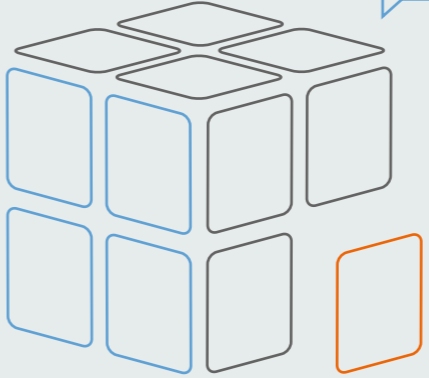

CGD500 is a user-friendly gas detection system that is easy to install. It lets you step into the future without having to throw away investments already made in cabling and devices. A modern system also reduces the risk of costly and time-consuming delays due to malfunction.

## Installed by licensed service engineers

The service engineers in our network are very familiar with CGD500. They make sure you get a professional installation, and we give you a one-year warranty on the new system.

**Easy to install.** All modules and terminals are mounted on steel plates that fit into the existing cabinet (20U-type). No drilling or modification needed, when replacing a GS3000.

Consilium **Common Platform**

## Existing cabling and devices

You can keep all, or most, of the cabling. All the gas detectors will be fully functional with the new system, but the address units for the detectors need to be upgraded.

## Flexible hardware and software

You get the hardware installed with no or minor interruptions (hot swap) and can easily add modules in the future. Software upgrades via USB or secure remote solution.

## Similar layout of alarm panels

The alarm panels for fire and gas detection are designed with the same menu structure to minimize risk of operator failure.

## Get in touch

Feel free to contact us for an upgrade proposal, including budget and time estimates.
